KEY ADVANTAGES

90° lateral imaging

the 4 orthonormal views allow visualization of object features that are hidden when looked at from the top

Long and thin object inspection

the characteristic aspect ratio of the four image segments perfectly fits long and thin objects

Built-in illumination

the device also incorporates two different light sources, for back and direct illumination

Suitable for measurement

the telecentric optics makes this module perfect for any multiplemeasurement application.

TCCAGE is an integrated optomechanical system designed to fully inspect and measure parts from the side without any need of rotation. Four orthonormal views of an object are provided by a bitelecentric lens through an array of mirrors.

- ¹ Sensors with different dimensions may cause incomplete images
- ² Working f/N: the real f/N of a lens in operating conditions.
- ³ Tolerance \pm 2 %.
- ⁴ Drop to 50% intensity @ 25°C.

⁵ Indicates the availability of an integrated camera phase adjustment feature
